# TANITA

# Professional Products

The global leader in health monitoring

WORLD NO.1 BIA BRAND

# **TANITA** The global leader in health monitoring

TANITA is a family run company that manufactures and distributes precision weighing and body composition equipment worldwide. Our products are widely used within the scientific research, healthcare, fitness industries and more recently experiencing rapid growth within the slimming, pharmacy and occupational health markets.

## A Global Leader

Established over 70 years ago in Japan, we have grown through continuous product innovation and a strong commitment to high manufacturing quality standards. Since introducing the world's first stand on BIA analyser in 1991 the product portfolio has expanded to meet the professional and domestic needs in over 50 countries worldwide.

## **Proven Clinical Accuracy**

25 years of investment in medical research and independent validation ensures the accuracy of our body composition measurements.

## **Respected By The Scientific Community**

The Tanita Medical Advisory Board is comprised of senior independent research, obesity and nutrition experts from around the world. They ensure Tanita products, communication and information are ethically and scientifically accurate prior to production and distribution.

## Quality Assurance

Tanita owns award winning manufacturing facilities in Japan and guarantee the highest quality products. All our medical products meet strict international quality standards and are independently quality controlled. Tanita professional body composition analysers hold an impressive 5 year guarantee

## Compliance

This product meets the following requirements:
Non-Automatic Weighing Instruments (2014/31/EU, EN 45501:2015)
Medical Device Directive (93/42/EEC)
RoHS Directive (2011/65/EU)
EMC Directive (2014/30/EU)

Tanita has obtained the DIN EN ISO 9001 standard.

## Notes

#### No 1 Brand:

\*Global market share as shown in report: Body Composition Analyzers Market by Product (Bioimpedance Analyzers (BIA), Dual-Energy X-ray Absorptiometry (DEXA), Skinfold Calipers, Air Displacement Plethysmography (ADP) and Hydrostatic Weighing) - Global Analysis & Forecast to 2019

#### Warranties:

5 year warranty on MC980MA, MC780MA,DC430MA, DC360, SC240

#### Disclaimer

All product specifications and designs are subject to change

## Our mission

is to contribute to better health for the people of the world through "measuring and monitoring"

## **Segmental Body Composition Analysers**

## **Body Composition** Analysers

WORLD No.1 **BIA BRAND\*** 

## **5 YEAR GUARANTEE**

# **BEYOND BMI**

BIA is an essential tool to evaluate progress of body composition changes

Scientific research has shown that excess body fat is directly linked to lifestyle diseases such as type 2 diabetes, hypertension and certain cancers.

While Body Mass Index (BMI) has proved to be an effective screening tool on a population basis, it has recognised limitations when working on an individual level.

Essentially, BMI provides information on body weight but it does not indicate whether this extra weight is due to increased fat or lean tissue. Waist circumference is becoming an increasingly popular alternative, however is proving to be intrusive and inconsistent due to difficulties in locating the correct anatomical site.

Bio-electrical impedance analysis (BIA) is the only practical and accurate method of measuring body composition on a personal level. Tanita BIA is clinically proven to be accurate with high repeatability and is used worldwide in research laboratories, health clinics, weight management facilities and fitness centres.

Tanita Body Composition Analysers are successfully being used to evaluate the effectiveness and progress of health and fitness programs:

 Receive an instant assessment of an individual's body composition status in just 20 seconds

Tanita Monitors are perfect for providing a 'snapshot' of a person's health and fitness levels. The measurement data can be used to refer the individual for treatment or develop a personalised health and fitness program.

Consistently monitors progress of any weight
 management or fitness program

Data can be automatically downloaded to allow data capture and demonstrate long term changes on body composition using the latest software.

• Builds a more personalised service with the client assisting compliance and motivation

By providing personal body composition information and setting step-by-step achievable goals such as improving hydration and muscle mass or reducing body and visceral fat, the person will be more motivated to continue a program. The readings will clearly demonstrate the changes in lifestyle even if their weight is not changing. All Tanita Professional Body Composition Analysers are made in Tanita award winning factories in Japan ensuring the highest quality materials and manufacturing. All Analysers come with a 3 year guarantee and require calibration after 300,000 uses.

## How Does Tanita BIA Work

Tanita Bio-electrical Impedance Analysis (BIA) operates by passing small electrical signals through the body between four footplates electrodes (and four hand electrodes in segmental Analysers).

The conducting ability of body water is then used to calculate the amount of lean mass, body water, bone mass, basal metabolic rate and fat mass.

By entering, gender, age and height a personal and highly accurate body composition report can be produced.

## How Accurate is Tanita BIA?

Tanita validation studies are based on comparison with gold standard body composition techniques DEXA DPXL. The equation is derived from measurements and correlation, using sophisticated statistical analysis.

The R2 value has proven to be highly accurate ranging from 0.85 to 0.98 depending on the Analyser selected (1).

## What are the advantages of Tanita BIA?:

- Differentiates fat and lean tissue
- Monitors composition of weight loss or gain
- Highly predictive value with extensive validations
- Excellent consistency for repeated measurements
- Sensitive enough to detect clinically important differences
- Body fat and muscle mass centile curves available for children, adolescents and adults
- Simple and fast to use
- Highly suitable for large-scale health surveys
- Data capture available
- Measurement Consultation Sheets
- Portable versions available
- Non intrusive no undressing or contact
- Low risk meets EU quality directives MDD, CE and NAWI

## What are the limitations of Tanita BIA?

- Not recommended for use by patients with pace-makers
- Not as accurate as the 'gold standard' 4 compartment model

## MC 980 MA Multi Frequency Segmental Body Composition Analyser

The MC980 MA Multi Frequency Segmental Body Composition Monitor is the ultimate tool in providing indepth information for truly personalised consultations.

Tanita has incorporated the very latest multi-frequency BIA technology together with increased data display and flexibility via in-built Microsoft® Windows® software. A full body composition analysis is performed in less than 30 seconds.

The data is then analysed and displayed on screen with full guidance notes and can easily be printed onto a consultation sheet for further discussion. Goals for weight and body fat can also be set to increase motivation and demonstrate progress of any weight or fitness program. All the user data can be stored and used for detailed trend analysis using data management software.

The MC980 MA has been awarded NAWI and MDD Approval for use in medical treatments and consultations.

## At a glance

- ACCURACY GRADE: MDD Class II-a, NAWI Class III
- Integrated Microsoft® Windows® operating system allows simple link ability to other compatible devices
- 6 frequencies allows intra and extra cellular water measurements
- Easy to use touch screen display allows free standing use
- Output to a full assessment sheet for easy consultation
- Simple modular system, can be assembled and disassembled in 10 minutes for ease of portability
- In-built software in 14 languages
- Weighing capacity 300kg
- Calibrated up to 300,000 uses with automatic calibration
   after each measurement

## MC 980 MA A comprehensive analysis in seconds

MC 980 MA brings fast, accurate results in seconds. The information is essential for providing a personalised and indepth consultation on all aspects of body composition. The ability to register users and track their progress is also an invaluable tool in demonstrating the effectiveness of any weight loss or fitness program.

#### **Client Profile**

The Tanita logo can be changed to any other logo to reinforce the service consultation. Other details include the personal data input and an ID number consisting of a maximum of 16 alpha numeric digits.

#### **Core Body Composition Details**

This table and graph shows the core components of body composition, measurements are shown in kg and % as well as plotted against desirable ranges to provide a clear picture of overall health and fitness status.

#### BMR / VFR / TBW Analysis

The Basal Metabolic Rate shows the number of calories required to keep the body functioning when at rest. Visceral Fat is the harmful fat in the abdominal area, the rating indicates whether the level is within the healthy range. Total Body Water shows the weight and % of water in the body. This is further divided into extra cellular and intra cellular water levels. The ECW/TBW ratio shows the relationship between extra cellular water and total body water.

#### **Physique Rating**

Physique rating assesses muscle and body fat rating into 9 body types.

#### Segmental Analysis

The segmental readings provide in-depth information for each arm, leg and the trunk area.

#### **Muscle Mass Balance**

Shows the balance of muscle between the left and right side of the body.

#### Leg Muscle Score

A score is given to the user's physical condition, and plotted against average healthy values for gender and age. The score is based on the user's leg muscle mass divided by their body weight.

#### **Body Fat Distribution**

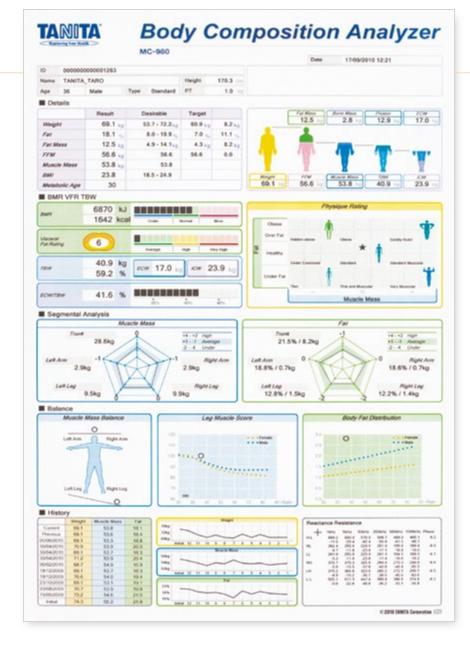

The ratio of upper to lower body fat is calculated, and plotted against average healthy values for gender and age.

#### History

Shows the first, past and most current core measurements. This information is also plotted on easy-to-read graphs.

## Reactance Resistance and Phase Angle Readings

The Reactance Resistance table indicates measurements for the impedance flow at each of the 6 multi frequency signals. Phase Angle is also shown.

# Simplicity at your fingertips

#### Integrated Windows® for Maximum Flexibility

For the first time a fully featured Windows® real time operating system has been incorporated allowing maximum flexibility in downloading data, uploading updates and connecting printers and other accessories for data management.

#### Inbuilt Software in 14 Languages

All of the in-built software is displayed in 14 languages (English, German, Spanish, Turkish, French, Italian, Dutch, Polish, Danish, Norwegian, Swedish, Finnish, Greek and Russian) making the administrator set up and usability simple, fast and stress free.

#### Interactive Touch Screen Operation

The intelligent extra large touch screen display will effortlessly guide the client through the measurement process through the extra large interactive touch screen display. The user can register their profile data for future use or just take a single measurement.

#### Full Analysis and Guidance Information Provided

Tanita has incorporated the latest Advanced BIA technology utilising 6 critical frequencies to take a body composition measurement in under 30 seconds. With the ultra low platform design and high weight capacity of 300kg, the MC980 is suitable even for heavier patients. Once the measurement has been taken, the user can easily see indepth information, screen by screen, of their results. Key measurements have guidance information boxes to help explain more intricate data.

#### Registered Users Can Access Previous Measurements

If the user has registered their profile, their body composition analysis will be stored. A full history of each measurement can be shown to highlight their progress helping maintain motivation and understanding of how their body is changing over time.

#### **Detailed Consultation Sheet**

A full consultation sheet can then be printed on any Microsoft® Windows® compatible printer for further discussion or future reference. The printer can be connected directly to the MC980 for ease of use.

## **Database Management Facility**

The database management system allows full analysis and manipulation of data suitable for research projects, client data management or programme effectiveness. Data can easily be downloaded to any compatible PC via a simple USB connection.

#### **Modular and Portable**

The MC980 construction is modular making transportation very convenient. Due to its clever design, it can be set up in under 10 minutes without any special equipment or tools. The in-built wheels allow for ease of movement from location to location.

## Multi frequency Segmental Body Composition Analyser with interactive display console and in-built SD card facility

MC 780 MA print out

The MC780MA has been designed to be an interactive stand-alone unit where clients can step on and take a measurement without specialist assistance. A full segmental body composition analysis is performed in less than 20 seconds.

The large LED dual display shows whole body composition measurement data and detailed segmental analysis in an easy-to-read illustrative format.

The measurement results are automatically stored on the SD Card, sent to a PC or transferred to a printer to generate a full consultation sheet for further discussion.

Goals for weight and body fat can be set using the 'goal setter' mode to increase motivation and demonstrate real progress of any weight loss or fitness program.

All user data can be stored and used for detailed trend analysis using the GMON Health Monitor Software.

Compatible Software

# BC 1000 Solution Monitor with ANT+TM Wireless Connectivity

The BC1000 offers the ability to wirelessly link data to remote displays, such as a personal computer, Tanita D1000 Desktop Display or selected ANT compatible devices. The BC-1000 will communicate wirelessly to transmit nine essential readings within seconds after stepping on the platform. The BC-1000 platform features no display, as readings are automatically transmitted.

The GMON FIT 1000 software has been designed specifically for this model ensuring fast capture of data and long term result analysis.

## Measurements

- Weight
- Body Fat %
- Total Body Water %
- Muscle Mass
- Physique Rating
- Basal Metabolic Rate
- Metabolic Age
- Bone Mass
- Visceral Fat

## At a glance

- The platform will automatically transmit readings when in range of the receiver unit
- High weight capacity 200kg
- Metric only or Imperial/Metric versions available
- Patented Transparent Electrode Technology
- Thin, low platform

## **Technical Specification**

| Age Range          | 7 – 99 years      |
|--------------------|-------------------|
| Weight Capacity    | 200kg / 31st 6lb  |
| Graduation         | 100 g             |
| Product Dimensions | 438 x 387 x 74 mm |
| Product Weight     | 3.5kg             |
| Power Source       | 4 x AA Batteries  |
| System Req         |                   |
| Wireless Protocol  | ANT +             |
|                    |                   |

## DIGITAL WEIGHING SCALES

With 70 years experience of manufacturing weighing equipment, Tanita has developed an extensive range of models with unique features to suit all needs.

Tanita prides itself on accuracy. The medically approved scales feature the ultimate weighing accuracy using single point load cells and meet strict MDD and NAWI regulations.

All materials used are hard wearing and durable ensuring long life and repeatability.

## WB 150 MA High Capacity Scale

The WB150MA scale incorporates single load cell precision weighing up to 270kg.

The extra large digital display is easy to read. Additional functions include a tare function useful for weighing small children held in an adult's arms.

The scale is available in a column version or a portable version.

## At a glance

- ACCURACY GRADE: MDD Class II-a, NAWI Class III
- High weight capacity 270kg
- Tare and weight lock facility
- Calibrated up to 300,000 uses with automatic calibration after each measurement

## BD 815 MA Digital Baby Scale with Fine Graduation

The BD815MA baby scale is specifically designed to weigh premature infants and babies and can register the smallest changes in weight by measuring in 2g increments up to 6kg and 5g up to 15kg.

The weight lock function displays the weight even after the baby has been taken off the scales. The extra large display features a blue backlight making the weight very easy to read.

Other features include a removable curved basket for easy cleaning, memory, recall, and an RS-232 output so data can be captured electronically.

## At a glance

## BD 590 Lightweight and Compact Digital Baby Scale

The BD590 Baby Scale is a battery operated, all-in-one unit making it highly practical for every day use. Tanita's patented load cell technology guarantees incredible sensitivity when the highest accuracy is required.

The BD-590 is lightweight, yet durable enough for the health care professional on the move. An extra large easy to read display makes this scale perfect for quick and accurate measurements.

The Recall function stores the baby's last measurement so a quick comparison can be made. The weight lock function displays the weight even after the baby has been taken off the scales.

## At a glance

- High accuracy up to 20kg with increments 10g for smaller babies
- Easily transported and quick to set up for use
- Weight lock, tare and recall options for added convenience
- Space saving design
- Tip resistant baby tray
- Hygienic easy to clean surface

## GMON PRO MA Health Monitor Software All professional body composition analysers connect

The GMON PRO software package has been developed in partnership with a leading software developer Medizin & Sevice GmbH. The software captures data from Tanita Body Composition Analysers and accelerometers, transfers it to a computer, and provides a client database with professional reports, graphs and trend analysis that can be used for client education, research and clinical records.

In line with EU regulations, the software is Medically Approved, which complies with MDD (Medical Device Directive) regulations. (Council Directive 93/42/EEC of 14 June 1993 concerning medical devices.)

In addition to body composition data captured from the Tanita Analyser, the user can input of target values and waist circumference measurements allowing a full overview of a clients health and fitness progress.

A full colour, printable, client consultation sheet showing segmental body composition analysis and ranges is available for MC980MA, MC780MA, DC360, DC430MA and SC240MA.

## At a glance

- One step body composition measurements transferred automatically to database
- Trend analysis of each body composition measurement to show client progress
- Medical Device Directive Certificate included in the pack
- Compatible with Windows operating systems up to and including Windows XP, Vista, 7 and 8
- Database version Firebird 2.0.5
- All cables included in pack
- Multi language versions available
